ı.	Basis	of t	he	report
----	-------	------	----	--------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	De	escription, Pages					
	1-	16	as originally filed				
	Cla	aims, Numbers					
	1-2	25	as originally filed				
	Dra	awings, Sheets					
	1/3	-3/3	as originally filed				
2. With regard to the language , all the elements marked above were available or furnished to this Authorized in which the international application was filed, unless otherwise indicated under this item.							
			vailable or furnished to this Authority in the following language: , which is:				
			ranslation furnished for the purposes of the international search (under Rule 23.1(b)).				
		the language of put	plication of the international application (under Rule 48.3(b)).				
		the language of a tr Rule 55.2 and/or 55	anslation furnished for the purposes of international and				
 With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing: 							
			ernational application in written form.				
			ne international application in computer readable form.				
		furnished subseque	ntly to this Authority in written form.				
			ntly to this Authority in computer readable form.				
		The statement that in the international a	the subsequently furnished written sequence listing does not go beyond the disclosure application as filed has been furnished.				
		The statement that the listing has been furn	he information recorded in computer readable form is identical to the written sequence ished.				
1.	The	amendments have r	esulted in the cancellation of:				
		the description,	pages:				
		the claims,	Nos.:				
		the drawings,	sheets:

INTERNATIONAL PRELIMINARY

International application No. PCT/EP 03/07347

EXAMINATION REPORT - SEPARATE SHEET

Item V.

Reference is made to the following documents:

D1: EP-A-0 955 062 (GENENTECH INC) 10 November 1999 (1999-11-10)

D2: WO 0103741 A

Novelty:

D1 discloses liquid formulations of human growth hormone (hGH) having a pH of 6.0 and comprising 5mg/ml of hGH, polysorbate or poloxamer 188 or 184 as non-ionic surfactant, sodium citrate as buffer and phenol as preservative. The subject-matter of claim 1 is new over D1 since it differs in the pH value of the composition (Art. 33(2) PCT).

Inventive step:

The subject-matter of independent claims 1 and 25 are considered as not involving an inventive step for the following reasons (Art. 33(3) PCT):

The problem underlying the present invention may be regarded as how to provide a storage stable liquid pharmaceutical composition of high concentrations of hGH and avoid crystallization.

D1 has solved the problem of storage stability of liquid formulations of hGH having a high concentration of hGH (5mg/ml of hGH) by adjusting the pH at a value of 6.0 and by adding polysorbate or poloxamer as non-ionic surfactant, sodium citrate as buffer and phenol as preservative. The aqueous formulations of D1 are storage stable at 2-8 ℃ for up to one year and also at temperatures above 8 ℃ (see page 5, example I). The difference between D1 and the present invention is the pH value. The problem of avoiding crystallization of liquid formulations of hGH has been reported in D2 (page 20, example 4). In the results of the test described in example 4 of D2 it is concluded that no crystallisation was observed in formulations with pH 6.2 in contrast to the crystallisation observed within formulations having a pH value of pH 6.0. In the present invention, the hGH concentration is higher than in D2. However, it is obvious to believe that if the same problem of crystallization has been solved with hGH concentrations of 3.33 mg/ml, the skilled man would try to solve the same problem by modifying the pH value of the compositions of D1 with 5 mg/ml of hGH in the formulations in order to solve the problem of crystallisation of storage stable liquid formulations of hGH having a higher concentration of hGH.

Dependent claims 2-24 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of

INTERNATIONAL PRELIMINARY

International application No. PCT/EP 03/07347

EXAMINATION REPORT - SEPARATE SHEET

novelty and/or inventive step, the reasons being as follows: Benzyl alcohol and phenol are considered for the skilled man as equivalent preservatives in hGH liquid pharmaceutical formulations (see D1, claim 14; D2, claim

D2 discloses that the aggregation of hGH can be avoided by closing the hGH in containers free of airspace.

The term "about" used in claim 1 for defining the pH value is vague and unclear. In the present invention the ph value seems to be a crucial value in order to carry out the invention and to solve the problem posed. Since the difference between the ph value of the present invention (from 6.1 to 6.3) and of the closest prior art D1 (6.0) is 0.1 and the solution of the problem relies in said 0.1 difference of the pH, the term "about" leaves the reader in doubt as to the meaning of the technical feature to which it refers, thereby rendering the definition of the subject-matter of said claim unclear, Article 6 PCT, Art. 33(3) PCT.
